COP310

Waterproof Surgical Drapes

Surgical drapes are designed to protect both the surgical site and the patient, and that is why they have been made of various fabrics in several sizes in order to meet the diverse requirements of the medical staff using them.

The range includes bi-laminate NWF and Softesse® drapes, and the sizes range from the smallest drape 50x50 cm to the largest 133x200 cm. The particular characteristic of Softesse® drapes is that they are water-repellent to guarantee a high barrier effect. Bi-laminate absorbent-waterproof NWF drapes guarantee rapid absorption of body fluids without impairing the structure and barrier effect of the waterproof part. Made from waterproof non woven fabric + PE. Waterproof - light blue.

COP378 - Sterile 50 x 75cm - Pack 100

COP380 - Sterile 75 x 90cm - Pack 50

Disposable Surgery Drapes

With adhesive & U-Shaped Hole (11 x 9xm). Waterproof non woven fabric. Light Blue. Patient drapes, with adhesive U-shaped split, are made of various fabrics in several sizes in order to meet the many requirements of the medical staff using them. The range includes bi-laminate NWF and Softesse® drapes. These drapes are made with 2 layers, which makes their surface 100% impermeable to liquids and micro-organisms. The particular U-shaped cut on the short side of the drape makes it easy to position the drape near the lower lip or the neck to create an effective sterile barrier. Ease of use and rapid draping help to prevent the risk of contamination and to avoid wasting time. The protective film of the adhesive strip has pre-cut areas to make it easier to apply.

COP370 - Sterile 50 x 75cm - Pack 50
